APPLICATION OVERVIEW DOCUMENT

Vehicle Service Management Application

Congratulations on completing your application definition! This document presents a summary overview of your application as defined in the Pega platform. It encapsulates the key elements of your application's design, highlighting its core functionalities and overall structure.

Please note that this is a high-level view and does not include granular details like data models or sample data. It's an ideal resource for a quick reference, facilitating discussions among team members and stakeholders, and for guiding strategic decisions in your application development process.

Blueprint ID: BP-2423644

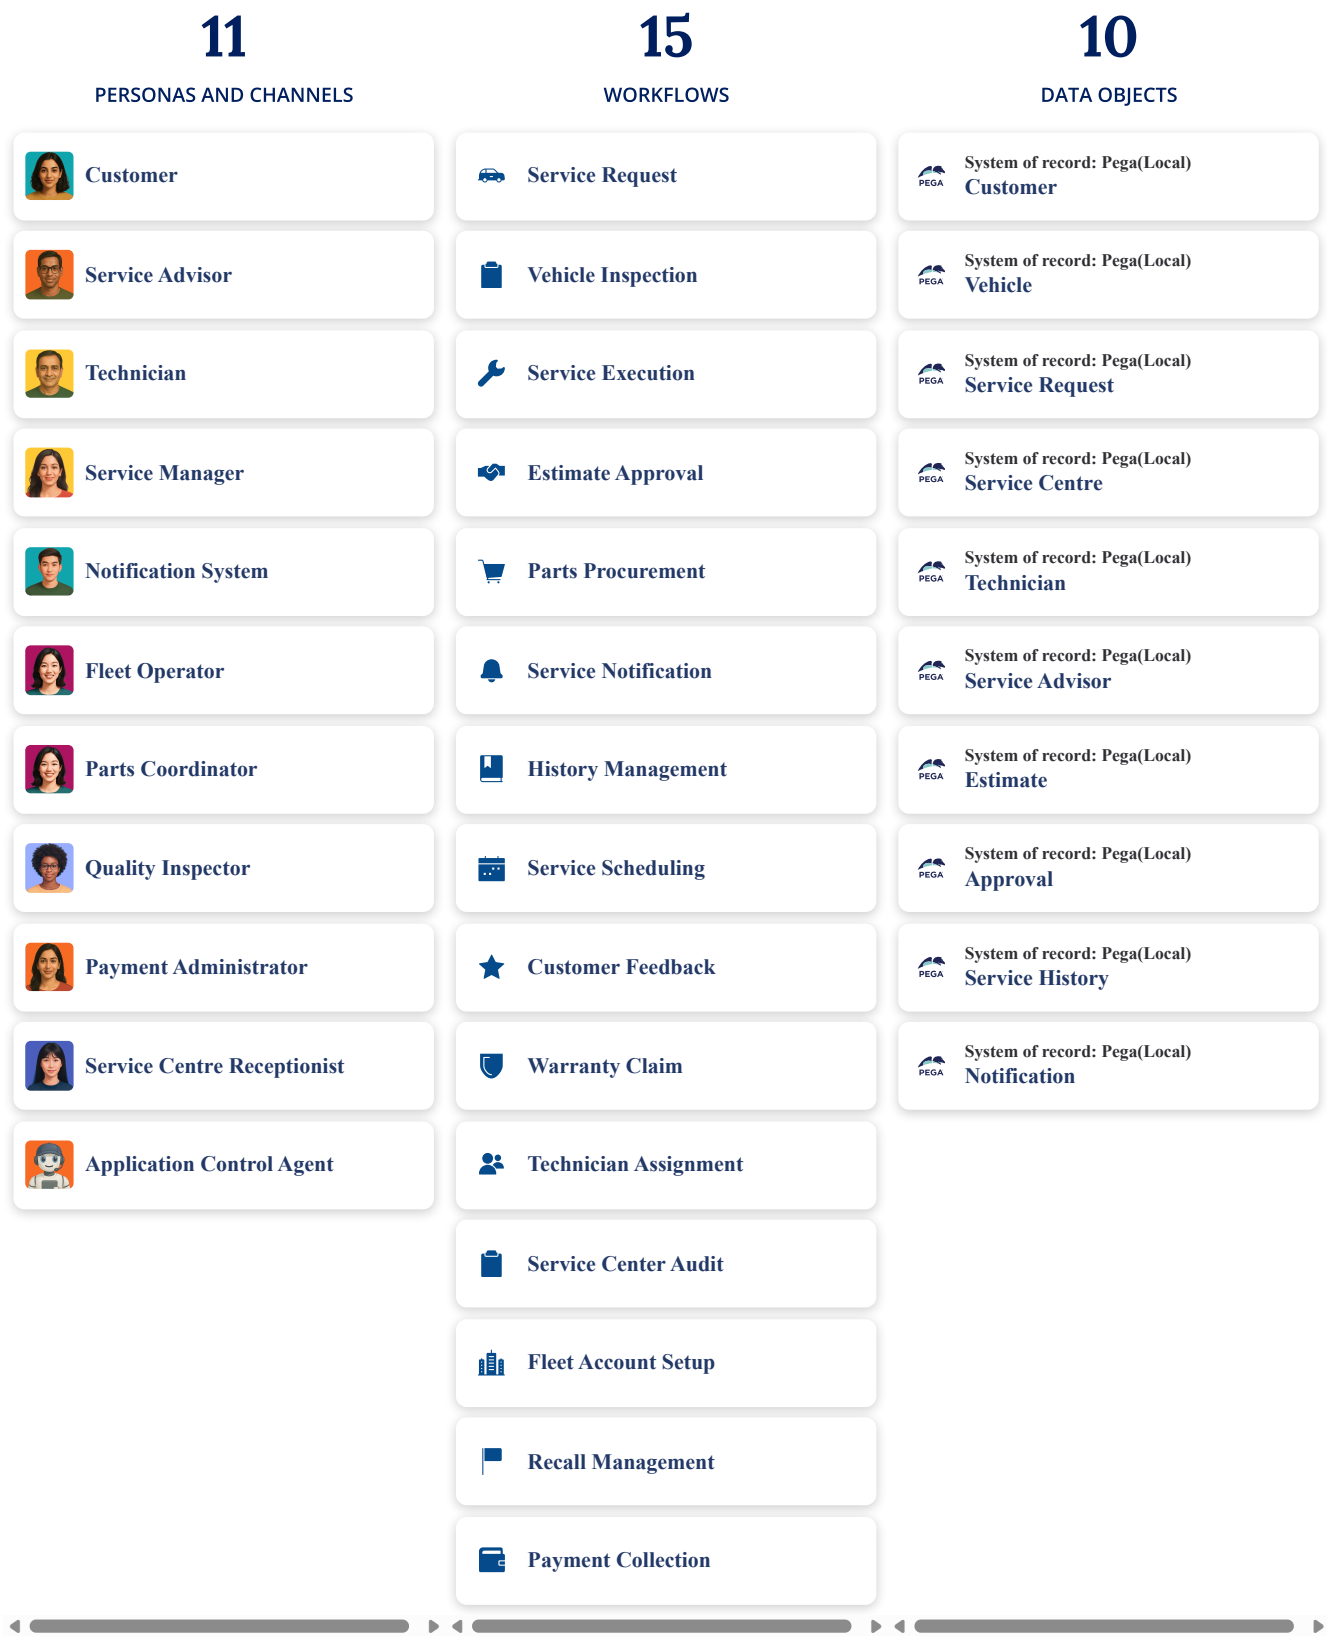

Application Context

Urban Fleet Operations offers vehicle servicing to individual customers across its service centres. Currently, customers raise service requests through email and phone calls, leading to delays, lack of visibility, and inefficient tracking of service history. To eliminate these operational bottlenecks, Urban Fleet Operations is building a Vehicle Service Management application on Pega Platform™ to: Allow customers to raise vehicle service requests. Enable service advisors to inspect vehicles and provide estimates. Capture customer approvals before service execution. Assign technicians and track service completion. Automatically notify customers upon service completion. Project Objectives Design a case lifecycle for vehicle servicing. Define and implement user interactions. Model required data structures. Configure basic business logic and automation. Ensure smooth flow from request creation to service completion.

Organization name	Industry	Language

Application Architecture

Users access the application through defined channels, assume specific roles, and trigger workflows that manage how work progresses. Those workflows operate on shared Data Objects to ensure the system stays consistent and up to date.
